

Washing setup explained by video

Watch and gain some knowledge about the possibilities with Washpower washing solutions

Standard Vs Turnable

ProCleaner X100 is the standard yet powerful, flexible and reliable wash robot for cleaning the vast majority types of pig houses. The machine is simple in its construction but houses an effective, high-tech wash robot that is able to cope with even the biggest jobs.

ProCleaner XT100 is specially developed for use in pig houses with obstacles along the aisle, could for example be the ventilation shaft or load-bearing posts.

With a simple and reliable rotating arm function, the XT100s advanced technology solves a common challenge with obstacles.

Options

A comprehensive set of options that gives your ProCleaner even greater flexibility and increases user-friendliness.

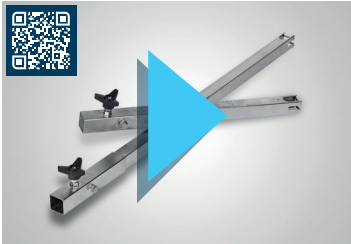

Alu rail

We have developed a lightweight rail system for open pig house environments. The length of the track system is limitless but comes in lengths of 3 or 2 meters.

Extra narrow version

In pig house systems with numerous vertical obstacles close to the walkway, the extra narrow version is the obvious solution for extra flexibility. The arms can be extended using the extension arms in pig houses where there are no obstacles.

Extension arms

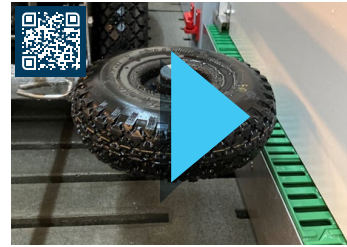

Where pen depths or pig house types vary a lot, the extension arms of 50 cm or 100 cm can be a great help when it comes to reaching into the pens, thus achieving even better wash results.

Larger hose diameter

For farms with a great need for extra quick washing, it is possible to choose the robot with a 1/2" hose. This allows it to perform the main wash with both nozzles at once. This solution requires a large pump capacity.

Special sidewheel guide set

Sidewheel set with multiple adjustment options developed for use against uneven sides. This set is especially designed for use in Mating Pens and Gestation Pens where it can operate against the gates of the boxes.

Sideguide

A function that forces the washing robot to Use one wall for guidance.

Ceiling wash

An add-on that makes it possible to include ceiling wash as a part of the washing program.

Getting started

To get started with using Washpower washing unit there are a few basics that need to be looked at, to ensure that the implementation will be as easy as possible. With a few measures our washing robots can be customized to most barns.
